Project description:

The entire project includes the selection and the launch of an ERP-System in a corporate group in the outdoor section with different brand-companies and worldwide acting brands and entities. Together with the phases software selection and implementation, the phases cutover with going live and Hyper Care are the most demanding ones in these kinds of projects.

In these phases we supported our customer with planning, change management and all necessary preparations for the cutover. Together with the customers project team the going live was orchestrated with a complete software landscape with various connected systems, like PLM, external logistic service provider, EDI (more than 1000 POS), new ECM and BI and a lot of further interfaces, with a big focus on risk minimization.

The ensuing hyper care phase was chaired, and all focus processes were successfully launched.
