

Project Showcase

LVS-Implementierung

Information about the customer

- + Retail: Sports & Outdoor
- + Revenue: < €50m
- + Number of Employees: < 500

Information about the project

- + Duration: 15 months
- + Project Team: 6 people
- + GCS Consulting Team: 3 people

Results

- + Validation of the intralogistics concept
- + Analysis of logistics processes
- + Identification of optimization potentials
- + High-level concept for material flow and warehouse layout
- + Investment estimation and project planning for logistics expansion
- + Tendering, selection, and implementation of a new WMS

Project Description

As part of the project, we analyzed the client's existing warehouse logistics and identified significant opportunities for optimization. To address capacity constraints, the client decided to expand the existing operations by enlarging the warehouse areas and the racking system, and to introduce a warehouse management system for the logistics site. The objective was to eliminate weaknesses in warehouse logistics and increase process efficiency through better space utilization.

Using a standardized methodology, we conducted a tender process and guided the client to a system selection decision. Together with the system provider and the client, we defined the system processes and designed and implemented the required interfaces. Supported by an intensive testing and training phase, the system was successfully implemented.
