

# Consulting Product Logistik

## + Challenges in Logistics

Companies are constantly required to meet the demands of various business models and customers. In the tension between speed, quality, flexibility, and cost, it is essential for the individual areas of

- + Raw Material Logistics
- + Inbound Transport Logistics
- + Warehouse Logistics for B2B and B2C
- + Distribution and Outbound Transport Logistics

to select the appropriate type of execution, service providers, and systems to be used, to develop processes, and to implement them in a structured manner.

## + The GCS Method

Based on proven and standardized methods, we develop logistics processes tailored to the individual requirements of the customer. In this way, we support our clients as needed at the various stages of a project.

- + Strategy and Objective Definition Process
- + Data Analysis & Requirements Definition
- + Process Design & Tendering
- + Implementation

### Raw Material Logistics

- + Planning and scheduling of raw materials
- + Process design and optimization of raw material handling

### Inbound Transport Logistics

- + Design / redesign of intralogistics processes
- + Tendering for logistics service provider outsourcing
- + Digitalization for warehouse management systems

### Warehouse Logistics B2B/B2C

- + Network planning and optimization
- + Tendering for transport service providers for sea freight, air freight, and land transport
- + Digitalization for supply chain management / tracking systems

### Distribution and Outbound Transport Logistics

- + Network planning
- + Tendering for transport service providers CEP & others
- + Digitalization of shipping processes, tracking systems & last-mile services

### Returns Management

- + Process design for B2B and B2C returns handling
- + Digitalization of returns and shipping processing
