### Project Description

During the project, the client's newly deployed warehouse management software was analyzed with regard to existing bottlenecks, and several improvement measures were defined. The client's objective was to assess weaknesses in the existing interface and to optimize operational logistics processes in line with the new technical setup.

The GCS consulting team documented current processes and bottlenecks, evaluated weaknesses together with the client and the system provider, and jointly defined and prioritized potential process adjustments. Based on the developed concepts and a tailored project management approach, the client was able to implement the necessary measures, ensuring that logistics operations were stabilized and efficiently prepared for the upcoming seasonal business.
