Project description:
In this project, we supported our client in developing a comprehensive test strategy for an ERP conversion of its four national subsidiaries and successfully carried out the test management for the ten different clients and business releases.

At the beginning, a standardized test strategy was developed together with the customer, which took into account the requirements of the project and the individual national companies. In the next step, we managed and monitored the functional tests from the creation of the test cases to the implementation in order to ensure continuous project progress.

Subsequently, test scenarios were developed together with the project team and carried out and reported in the User Acceptance Test (UAT). After the UAT, the future solution was tested under load with a performance test.
